# Automata e movie

PORTSMOUTH-based software house Automata has announced what it claims is an entirely new concept in computer entertainment.

Deus ex Machina is a unique combination of recorded music, voices and computer graphics - a kind of interactive cartoon or play.

Ian Dury, Jon Pertwee, Frankie Howerd and EP Thompson

are among those who take part and the £15 package for the 48K Spectrum - consists of two tapes. One contains 80K of program, loaded in two sections containing six computer 'games', and the other contains a complete audio sound-track of songs, music and dialogue.

Playing Deus ex Machina

## Atari delays plans

ATARI Corporation UK is to towards machines with a discontinue manufacture of its higher memory, and the 64K 600XL computer and has delayed an announcement - originally scheduled for last week of its plans for a replacement home computer.

There is also growing speculation that the company may also cease production of its 800XL machine.

According to Jack Tramiel, who visited the UK despite the cancellation of Atari's launch, new products will be announced some time in the first two weeks of October.

An Atari spokesman said, "There are major new product developments on the way, but Atari is unwilling to formally launch them before all the details have been worked out.

The 600XL will continue to be sold while stocks last, but research has shown a move

Atari's 600XL machine

800XL machine will then take over." The spokesman denied that the company had any plans to stop production of the 800XL.

As well as a new range of home computers Atari is expected to announce business micros compatible with IBM and Apple. These machines may not be manufactured by Atari, but bought from other companies under licence.

In the US, Atari is coming under pressure from creditors -Synapse are reported to be suing for \$17m for software made under contract when Atari was part of Warner Communications.

#### Philips MSX for UK?

PHILIPS may beat the Japanese manufacturers and be the first company to launch an MSX machine in this country.

The company's product marketing manager Sixto Rodriguez said, "Our MSX machine is now ready and we are continued on page 5

# **View**

VER the last two years
— with a number of key
developments — software houses have been steadily moving towards the achievement of an interactive film.

Such a software 'movie' would differ from an ordinary film or cartoon in that it would be possible for the viewer to actually influence the development of the plot.

The first step was the textonly adventure which can be considered as a kind of simple interactive book. The Hobbit was the next development — a book with pictures.

Ideas were also being drawn from arcade games like Pole Position and Track and Field—both fundamentally interactive cartoons.

But, in all of these programs something very important is missing — sound. In film terms they are all silent movies — the Buster Keatons of an emerging industry.

The first, technically successful, attempt to add a separate recorded sound-track died at the 'box office'. The *Ugly Duckling* was an educational program from a small American house called Software Movies. It used a clever pulse system to link the computer and a cassette recorder containing a voice-over telling the story.

This week Automata has brought the interactive film a step nearer with Deus ex Machina — the first serious attempt to produce a commercial computer 'talkie'.

In style, Deus ex Machina owes much more to film than it does to computer software and the result is highly original.

However, there is still a very long way to go. Ultimately, the goal must be to use an equivalent technology to laser discs to produce a full-blown feature film linked to a computer in such a way that the viewer can actually 'play the movie'.

#### Commodore acquire new Automata— **US** micro under which Amiga was to

COMMODORE has announced it is negotiating to sell a 68000based micro - a machine based on the same family of processor chips as Sinclair's OL and Apple's Macintosh.

The company is in the process of buying the Californiabased micro manufacturer Amiga which is currently developing a 32-bit 68000-based competitor for Apple's Macintosh. Amiga's micro will contain 128K Ram, 64K Rom, a built-in disc drive and modern. It will sell for around \$1,500.

Just a few days before the Commodore announcement Atari US filed a suit against Amiga charging it with breaking an agreement, signed in March,

#### Philips MSX

**∢** continued from page 1

hoping it will appear sometime in September."

The Philips machine will be Z80 based and is expected to have at least 64K Ram.

Chris Greet of Toshiba, the company which expected to be first with an MSX in the UK. said: "I had no knowledge of this, but I would be delighted if they do launch a machine."

 Another company due to bring out an MSX machine this vear is AVT Goldstar of Korea.

Its 64K machine will probably cost around £200, thus undercutting Toshiba's machine by around £80. The AVT machine will be launched at the Personal Computer World show on September 19.

Micro Dealer UK is to have exclusive distribution rights in this country.

ORIC Products International

vice'.

counter suit

develop graphics chips for Atari machines.

phics chips for Atari machines.

The Atari move is seen as a tactic to delay Commodore's launch of the Amiga machine while it finalises details fo its own 68000-based Macintosh competitor.

In the suit Atari claims that Amiga did not complete the contract, and that it refunded the £0.5m paid to them by Atari. Atari says that Amiga later completed the chips and offered them for sale at a higher price.

The Atari suit comes only a month after Commodore filed a suit against four of its former engineers, now with Atari, claiming that they had stolen Commodore design secrets.

#### Weetabix acts against Ubik

TYNESIDE company Ubik's game Paranoid Pete will not now be appearing in the shops.

Weetabix complained that the characters portrayed in the game resembled its own 'Weetabix men' used in advertising too closely.

When we first started work on Paranoid Pete we were working in collusion with Weetabix to produce a game based on their characters," said Ubik's marketing director Danielle Allan. "But when the game was complete, Weetabix weren't happy with the result.

'In order to be able to bring out a game ourselves, we changed many aspects of it. but Weetabix were not satisfied and it has now been shelved.

# the movie

involves first loading the Spectrum program and then playing both the computer game and the sound-track cassette - on a cassette player or hi-fi - at the same time. The two are synchronised by a count-down at the start and remain together for the duration of the game, around one hour.

The sound-track cassette tells the story of the life of a human being, created within a vast computer. The computer various stages of its life through a series of interactive computer 'games'. The goal is to live a 'successful' life — as monitored by a running percentage score.

On the sound-track cassette Jon Pertwee is the Storyteller who narrates the tale, Frankie Howerd is The Defect Police, Ian Dury is Fertiliser and historian and CND campaigner EP Thompson plays The Voice of Reason. The music is performed by Automata's Mel Croucher and a jazz singer, Donna

The complete package of Deus ex Machina, including two tapes and a poster containing the complete script, will be available from next week.

#### Adventure for OL out soon

AFTER West for the Commodore 64, Talent Computer Systems of Glasgow is working on a text adventure for the QL.

"It's very much a Dungeons and Dragons style game, with wizards, dwarfs and so on." said Talent's John Tweedie. "It has a working title of Beneath the Mountain and about 350 locations

Beneath the Mountain will be noticeably bigger than most other games of its kind, and is aimed at seasoned adventurers rather than the beginner." he continued.

"Events happen in 'real time'. and it contains a random maze generator, so that there are a number of ways to complete the game, and no two games will be the same."

Beneath the Mountain should be available in November, priced in the region of £18.

Talent is also converting West to run on the QL.

#### Acorn changes prices

ACORN Computer has revised the prices of two of its products. The price of the BBC single disc drive has been reduced by £50 to £199, while the price of the Z80 second processor package has risen by £100 from £299 to £399.

Commenting on the price drop of the disc drive an Acorn spokesman said: "Sales have increased considerably allowing us to cut the price. The dual disc drive price has also recently been reduced

down by £105 to £699."

be priced around £5.95.

Acorn says that the reason for the increase in the second processor's price is to enable dealers to receive a larger margin on sales, and thus have the resources to offer better customer support.

#### ZX Microfair

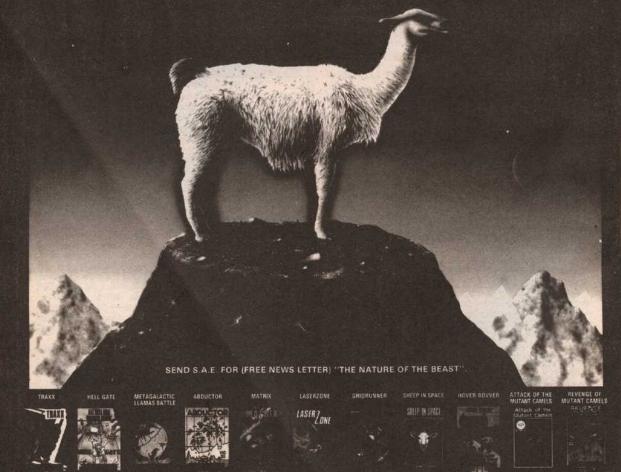

THE twelfth ZX Microfair will be held on September 8, at its usual venue, Alexandra Palace in North London. The fair will be open from 10.00am to 6.00pm. Tickets on the door cost £1.25 for adults and 60p for children.

#### to pay its £200,000 debt to KMP. and the advertising agency's court costs.

# lomosof

#### ORIGINAL SOFTWARE DESIGN

49 MOUNT PLEASANT, TADLEY, HANTS. RG26 6BN.

WOOLWORTH WILSHILL

# Quarter speed

Teel I must reply to M. Valentine's comments (August 23) on my letter about the Electron. The reason why most BBC software will not run on the Electron is because it is either written in Mode 7 or uses advanced sound commands, neither of which are found in the Electron.

Those which do run, often do so at a quarter speed.

Nicholas Haigney (still a lonely Electron user) 80 Parkdale Road Sheldon Birmingham

#### Support the Electron

I thought I would write just a few lines regarding Nicholas Haighey's letter (PCW Vol. 13 No. 32) on supporting the Electron.

I have a dream. That one day, the computer press will not call the Electron 'slothful' or anything else to do with the speed difference when compared to a BBC model B.

In that same dream I see that one day the computer press will not treat the Electron user as an absolute idiot/prat/wally because they have access to superior machines.

I also see in that dream a magazine devoted to Acorn Computers which does not publish silly articles on how to use the Electron keyboard, which really isn't all that difficult. Have they seen a Spectrum keyboard lately I ask myself.

And I see Commodore 64 owners actually admitting that they were conned into buying their computer because they thought it had 64K bytes of user memory — also C64 owners admitting that if they bought a fast-load cassette, loading can be achieved faster than using the 1541 disk drive.

May I also say that the first disc drives are now available for the Electron made by Pace, and Sir Computers of Cardiff are the first company to come up with a Mode 7 adaptor.

John T W Beckett
15 Surey Avenue
Droylsden
Manchester

PS. Who is this Boris Allen person anyway? It must be a pseudonym.

I fully expect that you will have displeased some Spectrum and C64 owners. Boxis, however, you will have mortally wounded.

# Who's who?

A fter seeing the picture appearing above my last Ziggurat column (August 23), millions of concerned fans have written asking whether I am really Boris Allan, or vice versa. The truth is that, when being photographed for the column I jokingly wore one of the Boris Allan Horror Masks which will be on sale nationwide in time for Halloween.

David Langford Reading Berks

# **Copy** facility

What a pleasure to use the Spectrum with the Microdrive. I would like to put my cassette deck in the rubbish bin if I could use the microdrive with every commercial program. But you have to spend hours to adapt each one for the Microdrive.

I am having a lot of problems converting Micro Prolog. This program is very boring to load and I cannot find any way to put it on Microdrive. I read in Issue 26 that Sinclair sent a letter to all the software houses instructing them to include a Microdrive copy facility in their cassette. Well, Micro Prolog is a Sinclair program, very expensive (especially here on the continent) and quite unadapted to be used with a cassette deck.

If any reader does know how to put *Micro Prolog* on to Microdrive, I will have the pleasure in sending him or her a special gift: for example, a can of snails and the recipe.

Vincent Magos Rue Louis Hap, 199 1040 Bruxelles Belgium

PS. Please, more and more articles like Baud Walk — we are not interested any more in copying out silly programs of STAR WARS.

# Alienated readers

I'm writing to you to protest about the infamous 'Smut Debate' which is currently taking up space in your letters page.

So far, all the people involved have been men. I thought at least one other woman might have had something to say on the subject, but since none have, here goes.

First, your reply to Christopher Bryant's letter: so it's OK to degrade women, as long as you offer value for money and aren't boring. Hmm. And there was I thinking that the idea was to get more women interested in computing. Obviously, I've been sadly misled by the various other comments you've made from time to time on this subject.

Secondly, the letter from the proprietors of Titan Programs: leaving aside the tirade of rude names which they hurl at Mr Bryant in lieu of a reasoned defence, it soon becomes clear from the text of their letter ("Out there in the big wide world, there are people yearning for smut...") that women aren't actually people after all... unless they are going to prove that a proportion of their customers are women?

As to whether you should carry their advertising: by doing so, you stand to alienate at least some of your readers. I for one will be going back to reading the Tony Bridge column in the newsagent if you're not careful. An awful lot of micro users are teenage boys—are you sure you want to condone degrading women to them—your reply to Mr

"... And stop calling it a clearance sale!"

Bryant's letter certainly seems to set the seal of approval on this kind of behaviour. If women are worthy of this kind of treatment, why not black people, or Jews, or any other kind of minority?

A final thought. According to your expressed policy, it is worse for a kid at home to copy the odd tape than it is for him to indulge in the worst kind of blatant sexism. Any other women (or sane men) out there agree with me?

Liz Holliday 108 Twyford House Chisley Road London

The editorial team tries very hard to ensure that the editorial content of the magazine is non-sexist.

However, attempting to control advertising is not easy and smacks of censorship. Where do you draw the line. Do you ban most of the advertising because it promotes excessively violent male attitudes, as in arcade shoot 'emups, for example?

# Reset the system

There was really no need for Simon Springett to unscrew his Interface 1 unit in order to load the Automania program by Mikrogen (see August 23 issue).

It is true that really long programs like Psion's Chequered Flag are incompatible with Interface 1. However, instead of disconnecting each time, and possibly damaging the edge connector, type in Randomize  $Usr \theta$  and then load the program. This totally resets the system and disables the Microdrive, allowing any program to be loaded.

M Scott

# Turbo Track

Make sure you don't run out of fuel as you race around the track in this game for Commodore 64 by P Biddle

he object of the game is to race your car around a race track avoiding the oil slicks which reduce your fuel so you are unable to reach home.

Luckily for you there are some fuel pumps scattered along the course that once hit gain you fuel — fail to hit any of these and you will find you haven't enough fuel to reach home.

Hitting another car when overtaking will result in your demise and the end of the game, and the amount of fuel remaining and the distance left from home will be displayed.

Control your car using the Z and C keys,

### Street Life

# Quick on the draw

Graham Taylor talks to a commercial computer graphics house -Communication Studio

It is easy to get carried away with the visual effects achieved by the latest computer games and forget there is a whole other world of computer graphics the commercial world where spectacular computer generated designs are used in TV advertisements, rock videos and feature

Sometimes the complexity of these effects is such that we can even be fooled into thinking that we are watching a conventionally photographed film or video image and not a computer effect at all.

Communication Studio is one company which specialises in the commercial application of computer graphics. More than that, it presents one of the burgeoning centres for an entirely new kind of professional computer user - the graphic designer with a light pen.

As the director of the Communication Studio, Philip Bergman explains: "We come from a variety of different commercial backgrounds - publishing, advertising, the BBC - but few of us have massive amounts of computer knowledge."

The bulk of the Studio's work is concerned with making promotional and sales displays for large companies. "There tends to be a lot of graph and diagram work, percentage share of the market by some particular product displayed graphically and so on. It's the kind of thing which usually involves hundreds of slides on a carousel we can do the same thing with a much wider range of graphic possibilities."

We watch a section from a presentation for a well known cigarette brand. Cigarettes grow, shrink, change colour en masse and singly in an illustration of their position in the market. "Obviously we don't have to redraw each item each time for each new section - the design, say, for the cigarette can be stored in the memory and recalled whenever necessary," explained Philip.

Communication Studio clients include. amongst others, Penguin Books, The Open University, Austin Rover, Kelloggs, Lego and Thames Television. "We did part of the opening credit sequence for the TV series Database,"

A current project involves presenting some of the material from a medical textbook. "It's interesting because it involves some fairly detailed and accurate work without losing the clear lines that are part of the character of computer graphics."

Watching one of the graphic designers at work I am surprised by how similar the design program he is using is to those graphics packages you might buy for a Commodore or a Spectrum. It has a menu with a list of things like Draw Line, Fill, Circle, Text, Change colour and so on.

Somehow it's a shock to see something as familiar as 'Press F1 to . . . ' on all this technology. It even says 'are you really sure? Y/N if you are threatening to do something drastic like wipe a design.

"It reflects the fact that the people using the program are not trained in computers and they need as much user - friendliness as someone who has just bought their computer and is wondering what to do next," says Philip.

Actually, by the standards of the technology used to create the graphics in, say, Tron, that used by the Studio is very modest. Roughly the equivalent to what a small business might use for accounting. "We use, as our main machine, a DEC PDP II which has been adapted by the addition of a special decoder for Naplps standard graphics."

Naplps stands for North Atlantic Presentation Level Protocol Syntax - not exactly catchy. What it is, roughly, is a graphic equivalent of MIDI for music or VHS for video - a standard which allows for a kind of advanced Prestel level of graphic, similar but higher resolution.

One important practical advantage of the system is the way it allows use of a small box called a 'presenter'.

"Once we have finished a commissioned work there are a variety of things we can do with it including producing videos to various formats, slides, stills and so on - we

> can also use the presenter. The machine can accept an Eprom of the production and then be used as partial computer terminal. We hire one out complete with burntin Eprom and then you hook it up to a monitor and it's controlled by a simple push-button to clock between sec-

Philip Bergman, director of Communication Studio

But what's it like for a graphic designer who, after years of training with pencil. pen, paint and paper is confronted with a £20,000 graphics terminal and a light pen?

I spoke to Mark Cornwell who has recently joined the company from the BBC where he worked with its Paintbox computer graphic system.

"Although in many ways the same skills you learn with a pencil or a brush are required, you do have to adapt to a new way of thinking. Any individual element of the picture can be treated like a separate pictore of its own and so the way you construct a picture, particularly if it isn't a simple representation, is quite different.

"The graphic designers who try to treat the computer screen just like a piece of paper and the light pen like a pencil are the ones who don't really get on with the

In many ways the designer is more like an animator. "You always have to think in terms of overlays, not only make things look right statically but to consider the way images flow into one another. The whole process is so flexible, though, that you can try out many alternative ideas in a much shorter space of time."

There is almost a problem with having too many possibilities. "You have to remember that at all times you are commissioned to do a certain job of work by a company and the message musn't become subordinate to too many tricks and devious techniques."

David Williams, another graphic desioner with the Studio, commented further: Really the considerations we have are the same as any other designer - what colours will look right, what is the end medium going to be and how can the style be best adapted to it."

What of the future for the company? Philip finds a couple of recent developments particularly interesting. "MSX standardisation might provide a motive for us to move down-market and do things for the home sector. In addition, MIDI [the electronic keyboard communication standard] could enable us to produce a complete sound and music production."

# CURRAH µSPEECH

# Speech Synthesiser for ZX Spectrum

The **CURRAH** µ**SPEECH** is ready to talk immediately on power-up, has an infinite vocabulary and outputs speech and ZX Spectrum sound through your TV speaker. There is no software to load with µ**SPEECH** — sophisticated Gate Array technology means you can just plug in and start constructing words and sentences like this:

LET SS = "sp(ee)k (nn)(oo) (ee)vil" will say "speak no evil"! Further commands control the "voicing" of keys as they are pressed, and an intonation facility allows you to add expression to the speech.

**μSPEECH** is fully compatible with ZX Interface 1 and may be used with the **CURRAH μSLOT** Expandable Motherboard, allowing easy expansion of your ZX system. **μSPEECH** and **μSLOT** will also be compatible with the **CURRAH μSOURCE** unit when it arrives later this year, allowing you to write **Assembler** and **FORTH** statements directly into your **BASIC** programs!

Top selling games like ULTIMATE'S Lunar Jetman feature **µSPEECH** voice output — watch out for other titles from Bug-Byte, CDS, Ocean, Quicksilva and PSS.

**μSPEECH** is available from BOOTS, W.H. SMITH, WOOLWORTHS, GREENS, BOOTS, JOHN MENZIES, SPECTRUM STORES and good dealers nationwide — or use the form to order the **CURRAH μSPEECH** — winner of the CTA 'Product of the Year' award 1984.

LOSS SEE MOTHERS SPECIAL

Zim Sala Bim — a totally new adventure experience!

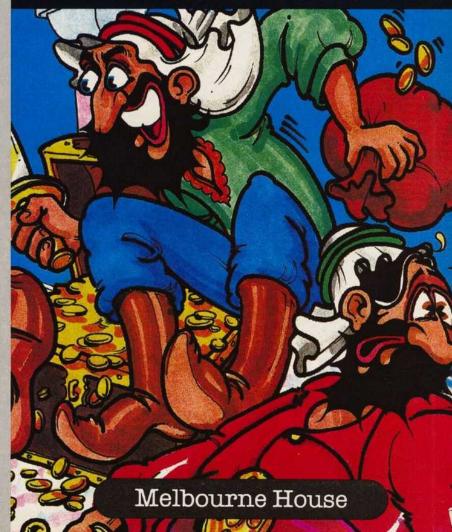

This program has it all:

- \* Smooth, arcade-style graphics.
- Every location brilliantly displayed in 3-dimensional graphics.
- Murder, mystery and adventure in the malicious Sultan's kingdom.
- Exciting challenging problems full of variety and

Zim Sala Bim brings to the Commodore 64 a new thrilling experience — you move your character through the Arabian desert and hopefully the Sultan's seemingly impenetrable palace by using joystick or cursor controls. Every object and obstacle is immediately graphically illustrated, and you will need all your adventuring skills to overcome the Sultan's evil influence!

Draw your sword and prepare to meet your fate!

#### A step-up

Hardware Ultradrive Price £79.95 Plus £3.45 P&P Micro BBC B (reviewed) and Dragon Supplier Ikon Computer Products, Kiln Lake, Laugharne, Carmarthen, Dyfed **SA33 40E** 

If you can't afford disc drives but find tapes tedious, Ultradrive is an alternattive worth considering. This cassette drive uses mini cassettes - one-third the size of normal audio cassettes. The trick is that it works very fast indeed. Ikon produced an earlier version intriguingly named The Hobbit which cost quite a bit more, but Ultradrive is twice as fast.

Each mini-cassette is divided into two "loops" per side when you first format it, and each loop can contain programs or data files. Programs load in a fraction of the time normal tapes require, and what's more you don't have to fiddle about winding through your tape for the start of the program. Ultradrive keeps a catalogue at the start of each loop and refers to it each time. It then winds forward to your program and zaps it into the micro. And thereby hangs a tale . . . that system of referral is fine on discs, but it can get in the way with cassettes. Sometimes you spend more time listening to the cassette rewind to check the index than it takes to load a program when it finally gets there.

sible to keep data files for use with your filing programs. By switching to complex mode Ultradrive even allows you to open up five different files at once if necessary. (Only the BBC version offers this facility at present, the Dragon version is still a simple single file system.)

The simple file mode does not eat up precious memory and leaves Page at &EOO, while complex mode takes up some memory space. The machine itself is a neat metal 31/3" cube which plugs into the User Port and power outlet, while a Rom chip fits inside. (The Dragon version plugs

came with temporary manuals and I trust the final versions will be a little more helpful, since the brief instructions I received would possibly puzzle people not familiar with disc filling systems already. A utility tape is provided with several useful little prògrams.

No one in their right minds would change down from discs to Ultradrive, but it offers an affordable step-up for cassette users. The speed and convenience is easily worth the price. Okay, so each tiny data cassette costs about £3, but that matches top quality disc prices.

**Dave Watterson** 

#### Ratpack

Hardware RAT (Remote Action Transmitter) Controller Micro Spectrum Price £29.95 Supplier Cheetah Marketing, 24 Ray Street, London EC1R 3DI

ticking a rat in your Spectrum may not sound like a good idea - but when the prodent in question is Cheetah Marketing's RAT (Remote Action Transmitter) joystick, things begin to make more sense.

The RAT does away forever with trailing joystick cables, since it operates by infrared transmission. A receiver unit plugs into the Spectrum's peripheral port, and the hand unit broadcasts infra-red signals to give the appropriate directions.

The device is compatible with Kempston protocols, so there is already a large library of games which can be used with it, and its controls are also easy to incorporate it into your own Basic programs.

The RAT doesn't look like much to start with - it's constructed of grey plastic which seems to have been chosen for economy rather than looks. The case is long and low and the RAT has a touch-pad instead of a 'stick' arrangement.

The touchpad is as much as a novelty as the infra-red system (a bit like Suncom's Joy Sensor for the Commodore/Atari machines) it's a flat circular surface which responds to thumb pressure. The Fire control on the RAT works in the same way. The design is such that it's equally easy - or difficult - for left and right-handers to use. Although reaction is almost instantaneous, and there are no moving parts to wear out, a lot of players may be put off the RAT because using it entails learning a whole new playing

The RAT needs a nine-volt battery (I can hear it now - "I only missed the high-score because my battery ran out") and the receiver which plugs into the Spectrum has a follow-on edge connector for other peripherals such as speech synthesisers.

The effective range seems to be up to 30 feet, though about 12 would be average. What's more, you don't have to be aiming directly at the receiver - there's a wide margin for error.

It's unfortunate that the three games Cheetah has chosen to launch along with the RAT are not particularly good demonstrations of its capabilities. Perils of Bear George is a cutesy character game featuring a greedy bear; Dragonfire is an adapted Imagic videogame; and Moonsweeper is an unremarkable space shoot-'em-up. Remember though, that the RAT is Kempston compatible, so most Spectrum owners will already have many suitable games.

On the whole the RAT - which will soon be available for the Commodore 64 - seems a reasonable buy at £29.95 - if a bit gimmicky.

It will take lots of practice to become as good a RAT handler as you are on conventional joysticks so don't, as the Cheetah adverts suggest, use your old joystick to stir your tea.

The age of Joystick Wrist may be over, but with the RAT we face the disturbing possibility of a nationwide outbreak of Touchpad Thumb.

Chris Jenkins

Leeds 7

boxes, triangles, rectangles, ellipses, and circles and fill them in. You also have a choice of five different lettering styles and heights to choose from.

A simple manual lists the facilities and shows you how to use the end results in your own programs.

Better than most of the other drawing programs around at the moment. Most of these options have a choice of three styles from which to choose, boxes can be opened or closed. With a joystick you hardly need to use the keyboard at all.

Ian Waltham

### 333

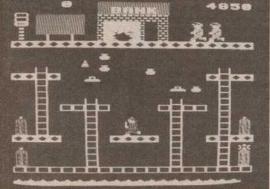

tions, too, are simply written and clearly printed for the younger player. I found the Bank Robber's movements frustratingly slow, especially when compared with the speed of the policeman opponent, although playing with joysticks might be an advantage here.

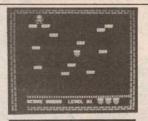

I suspect that prolonged playing would enable you do discern patterns of movement and attack which might make it boring to repeat - but I was not sufficiently interested in the game to get past that stage.

Smash and Grab would appeal to new users unfamiliar with similar games, but it seems to have no radically new inventions to give it the edge over others available. But the parking cones might just grab Terry Wogan fans.

Carol White

#### Factory floor

Program Uncle Claude Micro BBC B Price £6.95 Supplier Alligata Software, 1 Orange Street, Sheffield S1 4DW.

orkers, it's time to strike back! Uncle Claude, the arch-capitalist is planning to withhold his stocks of electrical equipment to increase his profits. Jobs are threatened... It's up to you – Micro Micky – to break into the factory at night and load up the conveyor belt. But watch out, Uncle Claude and the corporation are lying in wait to stop you.

It's a long nights work ahead of you. . . to get through 11 levels of electrical goods, from

Star chart

Program Astronomer Micro

Spectrum 48K Price £9.95 Sup-

plier CP Software, 2 Glebe

Road, Uxbridge, Middx UB8

strip plugs and cassettes all the way up to the top flight products, synthesizers, TV sets, 'cruise missiles???' and finally. the BBC Model B's. Twelve of each product must be loaded onto the conveyor belt before you can collect the key to the next level.

The action takes place in four different settings, two of which involve pushing the goods through gaps in a force barrier. Also, you can temporarily get Uncle C out of the way by flattening him with his own products as you push them around the factory. Keyboard or joystick controls may be used, either way your task is not easy so watch out or you'll soon become an ambulance

Finally, am I imagining things or could Uncle Claude possibly be related to Uncle Clive? – there's a certain passing resemblance in the picture on the box. More entertaining arcade action from Alligata.

Simon Wilson

### TO STATE

his program is nicely menu driven with six main options and computes sidereal (star) time, the position of 16 bodies in the Solar System including two comets. It animates some of them and plots

the night sky for any date, time

and place with good accuracy.

No clue is given as to the brightness of what prove to be the fainter planets and comets, so the program's starcharts, covering approximately 30° × 20° each, are too sparse of stars (limiting magnitude 4.75) to be of practical use here. But I admire the programmer's dedication in producing these charts covering the whole star sphere. An option to link the stars into their constellations is included.

The program does have some shortcomings: from plotting the star Mira too bright, causing a star just touching London's south horizon to hover there for two and a quarter hours, to computing Comet Halley's distance from Earth constantly wrong, to the test sample sky that is four hours adrift from reality.

The otherwise excellent 16page manual compounds the latter error by stating that "Orion is rising in the ESE" when it should be in the SSW for that date and hour. Reentering these again gives the correct view, but only after an 11 minute "Please wait" interlude whilst all 1000 or so stars in the database are recomputed, whether visible or not.

This interlude precedes any new night sky view even if changed by one second itself an unnecessary luxury. A

### Reviews

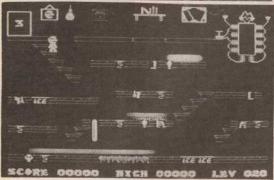

minimum option of one minute would suffice when it is appreciated that the outer planets, for example, don't "move" noticeably over 24 hours. The planets must be computed separately by keying the menu before they can be plotted onto the starcharts. All the data and

charts can be committed to the printer.

The program has some commendable ideas and is attractively boxed, but is a little overpriced.

Maurice Gavin

des

#### Skeletal

Program Frank n Stein Micro Spectrum Price £5.95 Supplier PSS, 452 Stoney Stanton Road, Coventry CV6 5DG

The first thing that struck me about this game was its similarity to Manic Miner and Jetset Willy. But I then realised that it is an almost exact likeness of Virgin's Dr. Franky and the Monsters.

There are two differences between the games from Virgin and PSS — that from PSS has 46 more screens, each of which is more complex than those in Virgin's program, and secondly, the PSS game is good. Very good.

The object is to move around the screen, collecting a series of bones which combine to form a skeleton — this is shown building up as you go at the top right-hand corner of the screen. What you are constructing is a monster, which, when 'activated' (you do this by pulling the switch at the top of each screen) comes to life.

The graphics in the game echo those in Manic Miner; the sizes of the various different things being similar. Although this does not allow quite as much detail as there is in, say, Mugsy, it means that more can be fitted onto each screen, giving each one a longer 'life' as far as the player is concerned. My review copy enabled me to start at any of the first 25 screens, which appear to get more difficult as you progress.

This game is for me the best release yet from PSS — better than both Blade Alley and Les Flics.

David Lester

Sisterial Sister

#### Check-out

Program Trollie Wallie Micro Commodore 64 Price £7.00 Supplier Interceptor Micro, Lindon House, The Green, Tadley, Hants.

nterceptor Micro's Wallie is apparently a 'well established' character in games like Wheelin Wallie and Wallie Coes to Rhymeland.

The last part of this trilogy is Trollie Wallie in which Wallie visits the supermarket.

The idea is that you guide Wallie around the store which is chock full of shopping items for Wallie to collect — 40 in fact. Wallie must collect them five at a time only (he can carry no more), take them to the check-out till, and then pay for them.

The supermarket proves to be a maze of wrong turnings and seemingly impassable obstacles and I must admit I've always found supermarkets to be a bit like that too. Solving the game requires both speed and thought as you search for the elusive switches that open barriers, and avoid the usual bizarre collection of weirdies

Ian Waltham

#### Space base

Program Vagan Attack Micro Spectrum Price £1.99 Supplier Atlantis, 19 Prebend Street, London N1 8PF

his is the first release I have seen from the budget price software company, Atlantis which is selling games at just \$1.99 a time.

Despite the arcade-action tone of the title, this is just another version of Star Trek. My only experience of this age-old computer game is Star Trek from R and R, which I quite enjoyed. Although the game is, it must be said, slightly dated now, if you engross yourself in it to the same extent as you might in, say, Jetset Willy, you will almost certainly get as much enjoyment out of it.

In case you do not know what the game is about, here is a rough idea: the galaxy (or your area of it, at any rate) has been invaded (usually by Klingons, but in Vagan Attack, it is, not surprisingly, by Va-

gans). These dastardly aliens have space ships and space stations, as do you, the Captain of the USS Andromeda (the USS Enterprise in the original version). You give the computer commands and direct your ship and Star Bases (space stations) as best you can to try and defeat the invaders.

This version from Atlantis has nothing especially new, except for a few nice graphics

now and then. It is written in Basic, which does not usually matter with a game of this nature.

If you like strategy games with a slight war-like slant to them, and do not already own a version of Star Trek, then you would be hard-pressed to do better than this one.

dece

**David Lester** 

#### Visible mine

Program Mined-out Micro Oric Price £6.95 Supplier Quicksilva, PO Box 6, Wimborne, Dorset

The pun in the title of Quicksilva's Mined-out reveals the idea of the game.

The screen depicts a minefield, which you must cross being careful to avoid the invi-

sible mines. As you go you leave a trail of 'string' — of which there is a limited amount — and a line at the top of the screen indicates how many mines are adjacent to the

square you occupy. Each time you successfully cross the minefield you go up a level.

After Level 1 things hot-up. You can now start rescuing maidens for extra points (what about all the gents in distress?) and, appearing randomly across the screen, is the minelayer. This character is actually helpful since it replaces invisible mines with visible ones. Of course with each new level there are more mines layed and after Level 4 a spider-like

bug starts to follow you around.
This game is neither a frantic

chase nor a tour de force of co-ordination so at first it seems quite easy. But to advance through many levels you inevitably end up taking some risks and stepping on a mine. Exit stage left, start again.

I found there was not enough variety to keep playing, game after game.

Vic Fielder

#### Trophy

Program Room Lord Micro Commodore 64 Price £6.95 Supplier Paramount, 67 Bishopton Lane, Stockton-on-Tees, Cleveland TS18 1PU

Room Lord is a dodge and search game in which you retrieve precious heirlooms from a ghost-ridden mansion just chock full of demons, cyclopses, chinese dragons and the rest.

You have to make your way room by room through a total of 16 screens, grabbing the goodies and making sure nothing else grabs you.

Like Miner, from which so many games now seem to derive, the way to successfully retrieve each item is often not immediately obvious.

Aside from getting the monsters, you also have to find the exit and all this within a time limit. Make it through all the rooms, including a special one on the last level you may only enter on completing the others, and you are awarded a display of a golden trophy.

If you haven't got tired of this type of game then it could be worth a look.

Ian Waltham

#### Blitzed

Program Falcon Patrol II Micro Commodore 64 Price 56.95 Supplier Virgin Games, 2-4 Vernon Yard, Portobello Road, London W11 2DX

alcon Patrol was probag5 bly the most successful and best of all Virgin's early software issues. Now here comes the sequel FPII and it's more of the same.

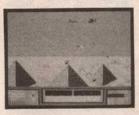

For those who never saw the original, Falcon Patrol was a fairly straightforward shoot

baddies and refuel your plane without getting yourself shot game, but with an excellent 3D landscape of blitzed buildings and incredible sound effects.

In version one you were up against nasty turbo fighters. In this new one the baddies are missile-equipped helicopters.

Aside from the helicopters

— which dodge all over the place — there are flak batteries taking pot shots from the ground and radar jammers that occasionally mean you are flying blind not knowing where the next attack is coming from. In FPII not only can you shoot air-to-air, but you can — and must — also attack ground targets using air-to-ground missiles. If you liked number one then you'll like number two — the formula isn't exhausted

Ian Waltham

#### Ice caves

Program Xanadu Cottage and Ebony Tower Price 26.95 Micro BBC B Supplier Alligata Software Ltd, 1 Orange Street, Sheffield S1 4DW.

he new twin-adventure package from Alligata features a double helping of mystery in the form of Ebony Tower and Xanadu Cottage.

Both are fairly standard adventures, with an on-screen description of the various locations – no graphics unfortunately. A glance at the vocabularly accepted in the two adventures, which comprises a section in the rather brief instructions, reveals the standard directional commands and facilities to save the present

position for reloading later, plus a range of additional instructions from the obviously useful (Kill, Pray, etc) to the 'presumably useful' – when do you Krie?

The games cover two favourite adventure themes: Xanadu Cottage is a treasure hunt in the forests, ice caves, mazes, tunnels and passages - plus, according to the instructions, factory and leisure dome (which I have vet to discover) - surrounding the cottage. Ebony Tower, on the other hand, is a quest to unravel the secrets of an island kingdom, or should that be 'dragondom', in which the usual types of magical characters (dwarfs, hobgoblins, etc) are encountered before the final confrontation with the dragon which inhabits the Ebony tower.

Although I did not have time

to penetrate very far into either game, if they continue in the

manner in which they began, both should provide a very satisfactory balance between those attributes of the adventure game, problems and frustrations. The locations are well constructed and the puzzles sufficiently devious to occupy both one's logic circuits and imagination.

Simon Wilson

#### Hyperdrive

Program Galaxy Raiders Price £6.95 Micro BBC B Supplier Visions, 1 Felgate Mews, Studland Street, London W6.

another version of Star Trek? It was probably the first long game most of us typed in from magazine listings. Still, Visions have had Ian Valentine produce another version of the arcade/strategy

You captain a space craft equipped with phasors, missiles, hyperdrive and target computer. A galactic map shows all known space and indicates the position of starbases and enemy craft. You can refuel at starbases but have to protect them from enemy

attack.

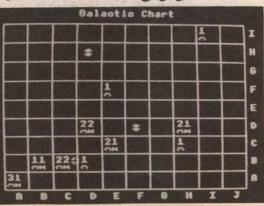

Hyperdrive to the sector in danger, then use your computer on the forward view to track down and shoot the bad guys. Damage reports are available and you must watch your energy levels.

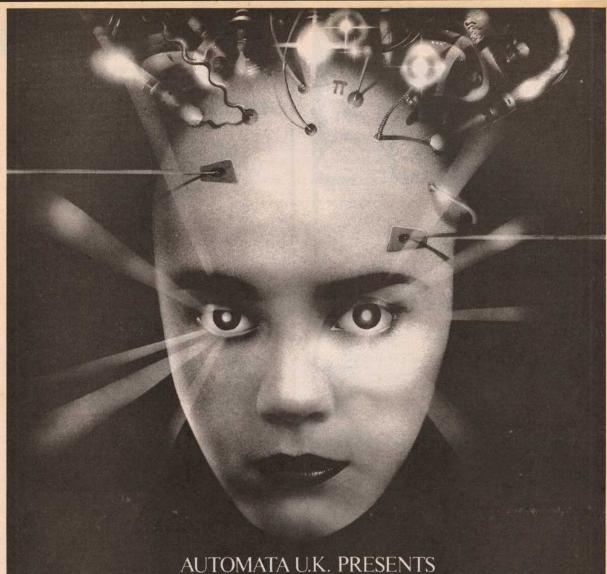

This is a very good implementation and getting the hang of it is quite tricky. Your moves have to be subtle and wary of enemy strategies. If you are successful you move up through the ranks from novice to star commander – but the task gets harder at each level.

The irony is that Gene Roddenberry created the Star Trek TV series to spread a message of peaceful co-existence and now it has become a shootfirst-ask-later game.

# You've got your QL hardware. You've got your Psion software.

Now get your Sunshine

Just released from Sunshine is the latest book from the highly acclaimed QL QLassics series - and it's called Quill, Easel, Archive & Abacus on the Sinclair QL. All these packages, which are included with every QL sold, are recognised as powerful in their own right, but when working together with one another, they become highly effective problem-solving tools for

Alison McCallum-Varev's book introduces you to all the four packages, but, most importantly, shows you exactly how to run

them as a complete system.

This book, essential for every QL Owner, will expand the day-to-day use of your QL, letting you run Quill and Archive in tandem for instance, and then outputting the results for graphic interpretation by the Easel package.

If you've Quill, Easel, Archive and Abacus on your Sinclair QL, then you need Quill, Easel, Archive and Abacus on the Sinclair QL.

Address	THE REAL PROPERTY OF THE PARTY

# By definition

lan Logan shows you how to produce user-defined graphics characters on your QL

he QL and the Spectrum are meant to be complementary machines and are not intended to compete with each other.

Hence, the ability to define one's own graphics characteristics, which is so much a feature of the Spectrum, was purposely left out of the QL's SuperBasic.

However, within certain limits, it is still relatively easy to create user-defined graphics (UDG's) on the QL. All that is required is an understanding of how the standard characters are produced.

The character set for the characters from Space to copyright symbol (addresses 20H to TPH, 32 to 12T dec) is to be found in the QL's read-only memory (Rom). However, its base address varies from the Rom version to another and it is perhaps best to find this address by looking into a channel header block. For example, if the standard channels 0,1 and 2 have not been distributed, the base address of the first character sets is given by

#### PRINT PEEK-L (167722)

Note, there is normally a separate character set for the characters 80H to BFH (128 to 191 dec); and this set's base address is found by using

#### PRINT PEEK-L (167726)

Each character set has eleven header bytes. These are: 1) The character code below the starting character, ie, if the first character is to be character 20H (32 dec, then this byte is 1FH (31 dec)

2) The number of character forms held in the current set, ie, for characters 20H to TFH (32 to 127 dec) this byte is 60H (96 dec).

3-11) Nine bytes to hold the form of a 'default character', ie, normally the QL uses "542854285428542854H" which gives a cross-hatch character.

The main body of the character set holds the character forms of all the characters. Each character has its form held in nine consecutive bytes, but, in each byte, only bits 6,3,4,3 and 2 are used.

As an example consider the form for the character '7'. The bytes are "007C04081020404000H", which can be represented as:

						OOH, O dec
				i		7CH, 124 dec
						04H, 4 dec
			1			08H, 8 dec
		1				10H, 16 dec
	1					20H, 32 dec
1						40H, 64 dec
1	1	6			-	40H, 128 dec
						OOH 0 dee

Now try the accompanying QL UDG program made up of the following four procedures.

Procedure udg. This is called just once. The procedure identifies the 'old' character set base address and copies over the

100 DEFine PROCedure uda

whole of the set into the resident procedure area. Then, procedures 'newset' and 'defchars' are called.

Procedure defchars. This is a simple procedure that allows you to define your own characters. The new character is displayed as it is created. This procedure can be called independently, as required.

Procedures newset and oldset. These procedures allow you to 'toggle', if wished, from the oldset to the newset, or viceversa.

# Testing, testing . . .

A simple word test for young children by J Blow

who wanted to copy words from his school reading books and found concentration a problem.

The program runs from Line 1200, the start of the main loop, sets up the required variables and Gosubs to line 1135.

Line 1145 is the screen introduction. The child's name is entered as P\$ in Line 1150 and printed at the top of the screen. A keypress is then awaited in Line 1190. This pause allows time for pencil and paper to be found.

After the keypress, the first word in AS is printed, a prompt is given and the timer is

Fig 1.

started and displayed. The child then writes the word down on a sheet of paper and when s'he has finished the "Y key is pressed, the time taken to write down the word is recorded, and the next word is displayed.

If the time taken for the child to write down the word reaches 100 seconds before the Y-key is pressed, then the program displays "Time Up" and an audible tone is heard. The next word is then printed.

At the end of the ten words a 'results' screen is printed showing the ten words and the times taken to write them out. A print-out of this screen can be made.

If you want to change the words stored in AS — the words to be tested — just type

Run and the routine at Line 1420 to enter new data is called.

The words are stored in A\$ with a space between each word; eg, A\$ = "Word1 Word2 Word3... Word10". Each word should not be more than nine letters long and must end in a space. Rem statements in the program show the main routines for those who may wish to modify and improve the program for their own use.

The large-print routine is borrowed from the excellent Horizon demo tape. To save the 300 bytes of machine code required for this program, load any program on side 2 of the Horizon tape. Then stop the Basic program using Caps and Break and type in, as a direct command, Save "mc" 32256, 300. Save this machine-code directly after the loader program in Fig 1. Then type in the main program (Fig 2) and save it using Goto 1455.

Run the program and enter your ten chosen words and then the test can begin.

Have you written the word?

# The computer game is DEAD...

# On the construction site

High-resolution character design by B P Hatton

Ithough the Dragon does not have a direct high-resolution text facility, characters can be drawn fairly easily from a prepared list.

The program below is designed to simplify construction and relative positioning of characters or even whole words.

Use of the keyboard for the drawing operation gives much better control than a joystick.

After each point, the condensed string (up to 255 characters) for your design can be listed on the text screen ready to incorporate directly in a program.

#### Program notes

600-610 Condense string

250K of pure mystery. Be the first to know. Send your name and address to:Eureka!, 228 Munster Road, London SW6 6AZ

How? Buy a P&M Software designer. No programming skill required. Unique Games utility high quality programs for 16K or 48K Spectrums. The tecnique: Using the P&M Creation technique redesign the layout of each game by simply pikeing up parts of the screen and dropping them somewhere else. Redesign all the levels of each game then save to tape for further use.

Our layout designers: Manic designer (48K): Redesign Manic Miner. Features rename cavern. Change robot, exit, willy, key positions. Change robot speed and add new features.

\* Jet Set designer (48K): Redesign Jet Set Willy. Features rename room, cheat mode. Change map, conveyor belts etc., positions and more. Create three new rooms 'Chuckie Egg designer: (48K):

Redesign Chuckie Egg and stop farmer Giles getting pecked.

Horace designer (16K or 48K):

Amazing machine code program lets any Spectrum owner redesign Hungry Horace. Also available are graphics designers. Featuring music from the games, roll sprite. Enlarge, sprite smoothly around screen much more. Excellent graphic designers.

Our graphic designers: Redesign all the graphics of Manic Miner.

\* Jet Set designer 2 (48K):

Redesign all the graphics of Jet Set Willy. Includes cheat mode.

Send SAE for Competition details and illustrated details on our products Send your cheque or PO to:

P&M SOFTWARE, 16 Bridge Road, Park Gate,

All products are only 12.99 each.

- ★ Popular Computing Weekly was voted magazine of the year by the C.T.A.
- ★ It is Britain's only weekly home computer magazine with a published Audit Bureau of Circulation sales figure.
- ★ It has a classified section that is now required reading for everyone with an interest in small micros, or who wants to buy or sell: SOFTWARE \* UTILITIES \* ACCESSORIES \* SERVICES \* HARDWARE ★ HIRING ★ CLUBS ★ RECRUITMENT \*
- \* £6 per SCC semi-display, 25p per word lineage.
- ★ 6 day copy date.

Mugsy gives a totally new direction for Spectrum thrill seekers — comic animation in text, stunning graphics and a full arcade game! Mugsy is your one and only chance to become the greatest gang leader with definite ill-repute!

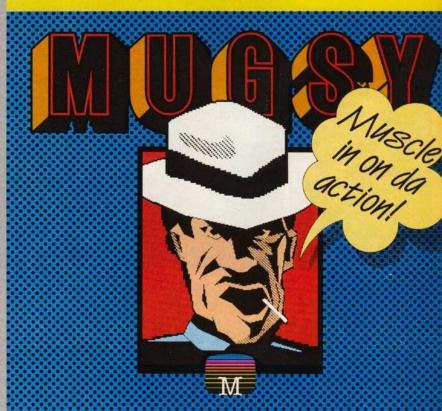

"Mugsy is a real good game wiv real A1 graphics"

Popular Computing Weekly.

"Mugsy is definitely different and the graphics are terrific" — Computer Choice.

"The graphics which were all done using Melbourne Draw are quite stunning. Not only because they are large, but because they really do look as though they have come from a comic strip" — Crash.

"Using a punchy, fast moving dialogue and stunning graphics, Melbourne House have really created an atmosphere of Al Capone and organised crime. Mugsy must still rate as Melbourne's best offering since The Hobbit" — Computer and Video Games.

# **Painting by numbers**

Computer Art, a sophisticated graphics drawing program by Michael Griffin

his program allows you to create complicated pictures on screen using a simple single-key system of instructions and either a joystick or the cursor keys.

As well as facilities like *Line* and *Arc* the program has a number of different area fills giving a variety of effects and also a facility to add text to the picture. The program will be published in two parts.

Going through Computer Art's commands, one by one:

Rubber banding. Accessed by pressing function key 0. This temporarily draws a line from the current cross position to the co-ordinates of a point called 'Point', it then self-erases.

Move Point. Accessed by pressing function key 1. This changes the co-ordinates of Point to be identical with those of the current cross position. This function is accompanied by a warning bleep.

Vertical line. Accessed by pressing function key 2. This draws a vertical line from Point up or down to the vertical value of the cross

Horizonal line. Accessed by pressing function key 3. This draws a horizontal line from Point left or right to the horizontal value of the cross.

Draw line. Accessed by pressing function key 4. This draws a line from Point to the cross.

Draw and move. Accessed by pressing

function key 5. This draws a line from Point to the cross and resets Point's co-ordinates to be that of the cross. Accompanied by a warning bleep.

Rectangle. Accessed by pressing function key 6. This draws a rectangle from Point to the cross.

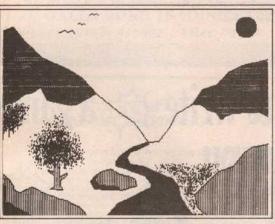

Elipse. Accessed by pressing function key 7. This draws an ellipse (or circle) with its centre at Point and with radii the respective differences between the horizontal and vertical co-ordinates of Point and the cross, ie, the white horizontal and vertical lines in Rubber band mode.

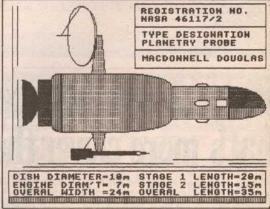

Place test. Accessed by pressing function key 9. This allows text to be typed in at the current cross position.

Place test. Accessed by pressing function key 8. This allows text to be typed in at the current cross position.

Air brush. Accessed by pressing function key 9. This creates a stippled effect by allotting a number of dots around the position of the cross.

The second and concluding part of Computer Art will be printed next week.

#### DUCKWORTH HOME COMPUTING

#### EXPLORING ADVENTURES ON THE BBC MODEL B

by Peter Gerrard £6.95

This is a complete look at the fabulous world of Adventure Games for the BBC Computer. Starting with an introduction to adventures, and their early history, it takes you gently through the basic programming necessary on the BBC before you can start writing your own games.

Inputting information, room mapping, movement, vocabulary—everything required to write an adventure game is explored in detail. There follow a number of adventure scenarios, just to get you started, and finally three complete listings written specially for the BBC, which will send you off into wonderful worlds where almost anything can happen.

The three games listed in this book are available on one cassette.

#### **BBC PROGRAMS 1**

Edited by Nick Hampshire

This book provides you with a range of useful and exciting programs for the BBC Micro. Games, utilities, graphics and functional programs are covered. The games include an exciting version of Star Trek, a full length adventure game, Space Invaders, Battleships, Space Blaster, Brick Basher, and many others. Among the functional programs is a personal information retrieval package which enables you to create and manipulate up to 365 records. This is a basic book for every user of the BBC Micro.

Written by Carl Graham and edited by Nick Hampshire, publisher of Commodore Computing International. £6.95

RICHARD SHEPHERD SOFTWARE

# Just a memory lapse

Keith Eyeions explains the mysteries off Rom/Ram overlays and how more of the basic user memory can be used

get a bit of a shock when they switch on their computer and discover that the "elephantine" 64K of RAM has somehow diminished to 38K of Basic user memory. Consequently, one of the things that puzzles people most is what has happened to the other 26K. Rest assured, that memory is still there, but what is it doing? It is not, as the Oric Atmos advert says, used up producing high resolution graphics. The sad fact is that in ordinary Basic mode, 20K of it is doing absolutely nothing!

To understand why, we have to look at the 6510, the central microprocessor in the Commodore 64. As assembly language users will know, the addresses for such instructions as LDA, JMP, JSR, etc, will only go up to 65535. In short, the Commodore 64

can only use 64K of memory.

Unfortunately, as well as 64k RAM, the Commodore 64 has 20K of ROM, 16K of which is necessary when Basic is being used. To solve this problem, the machine uses ROM/RAM overlays. This means that some areas of memory can either be occupied by RAM or ROM. When ROM is needed it is overlaid over the top of a block of RAM the same size. This block of RAM is hidden, and cannot be addressed or used. Unfortunately, in normal Basic mode, 16K of ROM is required, and so 16K of RAM becomes "hidden". A further 4K of RAM becomes isolated from the main block of user memory and cannot be used by Basic.

Below is a simple memory map showing the areas where there are ROM/RAM overlays.

HEX		DECIMAL
FFFF	KERNAL ROM	65535
F800	OR	61440
E000	16K RAM	57344
D000	CHARACTER ROM/ I/O RAM	53248
C888	4K USER RAM	49152
B000	BASIC ROM OR BK RAM	48066
8000		40960
9000	38K	36864
8000		32768
7000	BASIC	28672
6800		24878
5000	USER	20480
4000		16384
3000	RAM	12288
2008		08192
1000		64696
9808		02048
0000	SCRN MEM & MACHINE PNTRS	5 00000

From \$0800 to \$9FFF is the main block of user memory that can be used for Basic programs, etc.

From \$A000 to \$BFFF is usually the Basic ROM. This can be switched out when using machine code so that the RAM underneath may be used instead. It cannot be switched out in Basic, because it is the part of memory that tells the microprocessor what Basic instructions means.

From \$C000 to \$CFFF is a 4K block of RAM. Unfortunately, this can only be used by machine code programs because it is isolated from the main block of RAM (\$0800-9FFF) that is used for Basic programs.

From \$D000 to \$DFFF is the input/output RAM, which contains the colour memory, and the SID and VIC-II chips' registers. The character ROM also resides here, but is normally switched out. It is only ever switched in when it is being copied to RAM by the user to make a user defined character set.

Finally, from \$E000 to the end of memory at \$FFFF is the Kernal ROM. It is impractical to switch this out, because in most cases even machine code uses Kernal subroutines.

To demonstrate the presence of these ROM areas, try Pokeing 40960 (the start of the Basic ROM) with any number from 0-255, and then type Print Peek(40960). Since you cannot Poke into ROM, it will always return the number 148.

The location which determines whether a block of memory is ROM or RAM is 0001. Only the first three bits are used for this purpose, as shown below.

#### LOCATION 8881

BIT	NAME	BLOCK	MEMORY IF BIT = 1
1	CHAREN	SA000-SBFFF SD000-SDFFF SE000-SFFFF	

If you type Poke1,Peek(1)AND354 this sets bit 0 to 0 and switches out the basic ROM, revealing the RAM. Unfortunately, as this is the basic ROM, which the system requires to use Basic, the machine crashes and does a restore.

So, to look at the hidden RAM under the basic ROM, machine code is needed. Below is a small program which contains a small machine code routine. This switches out the basic ROM, and finds the number that you tried to Poke in earlier.

This was, in fact, Poked into the hidden RAM, although you did not know it, because when you Peeked 40960 you got the unchangeable number from the ROM. Finally the routine stores the number at 50030 where it can be retrieved by the basic program and switches back the ROM before returning to the basic program.

- 10 DATA169,254,45,1,0,141,1,0,173,0,160,141,110,195, 169,1
- 20 DATA13,1,0,141,1,0,96

- 30 FOR A = 50000 TO 50022 REM READ M/CINTO MEMORY
- 40 READD:POKEA,D:NEXT
- 42 SYS 50000: REM GO TO MACHINE CODE SUBROUTINE
- 45 N=PEEK(50030):REM GET NUMBER STORED BY MACHINE CODE 50 PRINT THE CONTENTS OF RAM LOCATION 40960

Simply Run the program and it will find the contents of RAM location 40960. Try Pokeing another number into 40960. Again if you Peek 40960 you will get 148 but if you Run the program it will retrieve your number from the hidden RAM.

For machine code users, here is a disassembly of the routine used in the program with a description of what each line does.

#### Machine code routine disassembly

C350 LDA# SFE C352 AND \$0001 C355 STA \$0001 C355 LDA \$A000 C356 LDA \$60 C356 LDA \$01 C351 ORA \$0001

C384 STA \$0001

Instructions \$C350 to \$C355 are the equivalent of Poke,Peek(1)AND254. They make 0 of location 1, a 0. This switches out the basic ROM. Instructions \$C358 to \$C358 find the contents of the RAM location \$A000(40960) and store it in \$C36E(50030) where it can be found by the basic program. Instructions \$C35E to the end switch the basic ROM back in by doing the machine code equivalent of Poke1,Peek(1)OR1, and

For people using only Basic, hidden RAM is useless. As you have seen, switching out the ROM causes the system to crash. For machine code users it is very useful for several reasons. By switching out the basic ROM (\$A000-BFFF) using a routine similar to my one you get 50K of continuous RAM from \$0800 to \$CFFF (2084 to 53247). This is used in large programs such as Manic Miner.

then return back to the basic program.

It is harder to make use of the RAM hidden under the Kernal ROM, because most machine code programs make use of Kernal subroutines located in the block from \$5000 to \$FFFF, (\$7344 to 65535) such as CHROUT (to print messages on the screen). With clever switching in and out of the ROM it is possible to locate parts of the program that do not require Kernal subroutines, or possible data for music, or even a bit-mapped screen there.

Finally, in a time when the prevention of software piracy is important, it is worth noting that programs located in hidden RAM cannot be examined by someone who does not have a disassembler that is written in machine code.

# TOTAL REALISM FROM

#### HIGH SPEED

#### (\* commodore

COMMODORE 64 owners, at last the long wait is over-FASTBACK allows multipart software to load around ten times faster and run independently of the utility. For example 'The Hobbit' loads in 150 seconds with FASTBACK.

Supplied on tape with full instructions ONLY £9.95

SPEEDMASTER is here. Allows choice of save speed. Approx. 2 × faster. ONLY £7.95

## TAPE TO DISK TRANSFER

Transfer games etc. to disk. Supplied on tape with full instructions for:-

.£9.95

TRADE AND OVERSEAS ORDERS WELCOME

Great news for Spectrum users! Now you can easily make superb graphic adventures for your friends and special occasions!

YOU can make a game quickly and easily - AND THAT'S A PROMISE! All you need is The Dungeon Builder from Dream Software.

It's perfect for complete beginners as no programming knowledge is needed at all. It's perfect for experts because you will save a lot of time. Everyone has fun.

It's true - now it's really simple to produce a full colour graphic adventure for your friends, your parents, your children — anyone. Great for parties your adventure will include your guests!

The program runs on your 48k Spectrum. It's available from Boots and lots of computer shops. It's easy to order by post if you want to: just clip the coupon and send us your cheque, P.O., or access number for 9.95 plus 45p p&p and we'll send you the program first class by return. We give a noquibble guarantee that the program will load; we replace immediately if you have problems.

Dear Dream, Please send me "The Dungeon Builder" by first class return post. I'm happy to order by post because you GUARANTEE to replace the program if it doesn't load when I get it. I enclose payment for 9.95 (plus 45p p&p)

Address

(PCW1)

Post your coupon to Dept PCW1, Dream Software Ltd, P.O. Box 64, Basingstoke, RG21 2LB

## **Open Forum**

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed.

#### Rotator

on Dragon

This program can demonstrate how a line, shape or picture can be rotated in a circle about a chosen centre.

The computer requires two parameters,

the number of lines to be drawn (from 1 to 300) and the chosen interval value.

After the input stage the hi-res screen is selected and the picture rotation drawn.

When the rotation has finished the process can be repeated by simply pressing the space bar.

You can print out the design if you have a suitable printer as a provision for hard copy is included in the program.

## **Baud Walk**

#### Smokey bear

his week Baud Walk takes you on a transatlantic stroll around one of the largest — and most successful — databases in the States. Let's hope it's not long before these are more cheaply accessible in the UK.

Compuserve is aimed squarely at IBM PC owners, a menu driven Ascii system that's also able to respond to command words. I accessed Compuserve via trusty PSS — which incidentally accepts modems at a variety of speeds — and my time on-line was registering at around 1bp a minute.

The database is divided into four main categories, home,

business and financial services and personal computing. Dumb terminal emulation software is adequate for the task, although in the States tailored software is on offer to make Compuserve easier to use. The database scrolls the screen and you are able to attach your identity to different files and shuffle them around. It has a fairly simple on-line text processing function and a variety of programming languages.

If you want to know what hardware and other IT developments are about to land in the good old UK, Compuserve is the place to look. Like many networks, computer industry buffs are on Compunet and post up information almost daily about what's happened and what's going to happen. For instance, a fellow databaser tells me he knew the full spec of the Macintosh a good month ahead of information reaching the UK through the media.

On top of the PSS call, Compuserve bills you for computer access time which currently runs at around six dollars an hour off-peak.

Compuserve offers one other attractive service — a type of on-line CB, which allows you to have real time on-line conversations with other users. The screen displays the conversation to anyone who wishes to view (called a lurker) and a directory will display the number of people taking part and their CB handle.

On-line CB has some special-interest sections — for example, computing, cookery, medicine — all users can be anonymous hiding behind their handle on one of the 36 SIG channels.

Typing the command /Sta reveals the current status of the 36 channels. It read like this: (2) 3# (14) 7 (33) 19. The channel number is in brackets and the number of users currently logged on next to it. The hash symbol tells you which channel you are currently monitoring. Once logged into a channel nothing more is required than

to type in your sentence and press Cr.

Even on my call, which took me to Compuserve's mainframe in Ohio via PSS UK, and Telenet in the States, the response times were tolerable.

And despite all the high technology and vast databases on Compuserve I'm told that on-line CB is the service. Let's hope one of the UK networks switches on soon.

You can write to Compuserve for information — even if you actually don't want to join. The address is: Compuserve, 5000 Arlington Centre Blvd, P O Box 20212, Columbus, Ohio 43220, USA.

Robin Wilkinson

Band Walk is a new weekly column with news on networking, databases, reviews of modems and software and points of contact for information.

Any readers with experience of networking are asked to send their experiences or news of services to, Robin Wilkinson, Baud Walk Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

He can also be contacted on Prestel mailbox 019993727.

— which I assure you
reflects the letters I receive
and not my personal leanings.
Where are all the Commodore
owners? Can't you write?

Craig Waddell of Glenrothes sends out a cry for help to get past the third screen of the very picturesque Jack and the Beanstalk from Thor. Can anyone help him? I was pleased to see some people sending in their lists of recommended games for the Spectrum. Dean Hartshorne of Wolverhampton likes Ant Attack from Quicksilva, Deathchase from Micromega. Jetset Willy and

Ostron (which is a version of the arcade game Joust) from Softek (now renamed Kwak Attack, I think).

Gary Burrows of Liverpool suggests that Melbourne House's Penetrator, Softek's Starblitz, Psion's Space Raiders, Imagine's Arcadia and Megadodo's Phoenix are the best copies of Scramble, Defender, Space Invaders, Galaxions and Phoenix respectively. Does anyone disagree?

Finally A Woods and P Page of Andover want to warn everyone away from Sinclair's Games 1 "which comes complete with two UDG's". Considering its age, I'm surprised this tape is still available.

Kevin Allen of Westonsuper-Mare says that to get infinite lives on Android 2"kill yourself four times, then find a spot where a monster goes over a mine. If you time it right, you can be killed twice giving six lost lives. You then have all the time you want." A tip all the way from Brussels by Said Le Page for Micromania's Tutankamun: "Merge the basic loader program and list it. Adding line 2. Poke 34953,57: Poke 34970,58 will let you start from tomb 1 to 9. Line 3. Poke 27279,x where x is 0-10 gives you infinite or 1-10 lives. To finish type line 4. Randomise USR 27200 and RUN."

A letter from the mysterious Ensor', who has a high score of 48806 on Ant Attack, gives some useful tips. "You don't have to return to the front of the city to rescue the person; you can jump over the wall and they are safe. Also, if you can get the person to stand on your head by running into a wall with them in front of you, then they will do a tap dance." Great fun! Please send a copy of your map when ready.

Finally some more high scores. Robert Kidd of Ipswich sent in a list of impressive results: 3D Ant Attack 44,285.

Pssst 187,855. Manic Miner 31,709 on level 19. Zzoom 33,390 on level 6. Jetpac 56,800 on the fourth rocket.

Chris Hughes of Sale in

Cheshire has rescued all ten hostages in Ant Attack with a score of 46,210. Des Claypole of Peterborough has topped this with 46,537, and has also beaten Glenn Ackrovd of Bradford who scored 44,040. However, Glenn has reached some superb scores for Bugaboo, 31 seconds to escape in 12 moves. Penetrator 139,210 - there and back six times, and International Soccer for the Commodore with a record of 42 unbeaten matches on level 9 with 22 wins in a row and a best score of 6-0.

Finally, Michael Lewis of Harold Hill is understandably full of praise for Sinclair's Stop the Express on which he has scored 2,920. Tony Kendle

The Arcade Corner is a new section for anyone who enjoys playing arcade games. If you have any comments, from playing tips on difficult games or programs you'd particularly like to praise (or blamel) then write to: Tony Kendle, Arcade Avenue, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

## Sky walk

he recent launch of the European Space Agencies Arianne 3 rocket highlights the big business of putting satellites into orbit. The advantage that the European system, Arianne has over the US Space Shuttle is that Arianne can take satellites higher and into therefore more precise orbits.

A geostationary orbit means that the rotation of the satellite in relation to the Earth is about the same so that the thing stays more or less where it was put, rather than going around the planet and only being available from a fixed place on Earth for a few minutes each orbit. This is vital for communications satellites, of course; particularly for satellite television. Aerials need only point in one direction and the transmitter is available 24 hours a day.

The cost of taking the satellite up has to be compared to the cost of laying thousands of miles of fibre optic cables underground from the studio to each home as in cable television. The only advantage is that cables can be monitored so that subscribers to the cable network can be duly charged a fee. Access to a satellite, as long as you have the aerial and receiver, cannot be monitored so the revenue would have to come from advertising.

Since a geostationary TV

satellite that is high enough, and many are, can cover entire continents, they hold great incentives to television companies. To many people, the prospect of satellite television is very desirable: in Europe, for example, it may help to unify, language differences will be reduced and hundreds of channels could be available.

Cable television, on the other hand, cannot hope to cover or reach such vast audiences, so will probably tend to stick to fairly specialised viewing such as local affairs, minority interests, sport, feature films, etc. Both systems in conjunction with each other could provide almost limitless choice in television viewing.

This technology presents the broadcasting companies with a great dilemma. At the moment the success of a station is tested by its ratings or number of viewers; that is, its ability to reach enough people to bring in sufficient advertising revenue.

The problem is whether to transmit by cable to a known number of paid-up viewers and be pretty sure of reaching them all, or to transmit to a hundred million potential viewers without any clear idea of how many might be actually watching. I suppose it depends on what you are advertising. I wonder which one Uncle Clive would choose to advertise on.

## SPECTRUM & BBC

PREDICTOR

Now in its 3rd successful season, Mayday Softwara's Pools Predictor has been made even more powerful with a new and unique 11,000 match database. SEVEN separate forecasting techniques have been combined to give you the best forecasts yet. Still as easy to use as ever, you can you can tune the program yourself to improve forecasts as the season progresses.

RACING ANALYSER

Using the racecard from your daily paper, this easy to use program will combine 7 different horse race factors to analyse any race, flat or NH.

## **Summon help**

s the purpose of arcade games is to test the reactions in a variety of ways, so the purpose of adventure games is to test the mind — although this can be achieved with varying degrees of style and cunning!

But the struggling adventurer eventually has to call it a day, and summon help. This is one of the functions of this column, a function that becomes increasingly difficult to perform as more and more gamers discover the delights and frustrations of adventures.

The International Adventure Club has recently been formed by Simon Clarke to come to the rescue of all those trapped in a goblin's dungeon - and harrassed columnists! For a small yearly membership fee, an excellent Helpline service will be available to you. Simon used to run an Adventure Help column, so should know what he's talking about - and, of course, as the membership grows, so the pool of adventure experience gets larger and larger, which benefits all members in the end. Not only this, but software is obtainable at special discount prices. The IAC has just gone onto the Prestel Mailbox, which means that, as long as you can plug into it, help is just a phone call away! The Club Newsletter will be on the network, and subscriptions can be renewed, as well as orders placed. "Several hundred members" are already using the system. If you're interested, write to: International Adventure Club. 10 Ennis Close. Harpenden, Herts AL5 1SS.

Someone else who is just a phone-call away is In-Home Computing, a company that has been set up by a couple of keen adventures, John Miles and Ken Matthews, to give help to baffled adventurers everywhere. Both are interested in computing, electronics, science fiction and strategy wargames, and, upon being made redundant from their jobs, decided to pour everything they had into creating a business based upon what they held most dear — computer adventures. This business will consist of a shop and an Adventureline, which will be a 24 hour Ansaphone that adventurers, customers or not, can use.

"Although we have solved quite a few adventures ourselves, there are still a few gaps, and we hope to have adventurers send us their solutions, maps, etc., for evaluation so that the best of these can be reproduced professionally for sale, with royalties payable to the author. We will also accept software for assessment with a view to publication on our own label. Finally, we would like to point out that, as a specialist dealer, we will be making our shop, particularly the basement dungeon, a pleasant and exciting place to visit," says Ken.

The shop is not quite ready, but in the meantime, Ken is happy to help — just call him on 01-646 4441 (not a 24hr service yet!), or write to him (including a sae) at: Flat 1, 29 Upper Green East, Mitcham, Surrey.

On to the Help for this week, and the first enquiry about an adventure that I mentioned a few weeks ago, and liked very much for its packaging as much as the adventure itself:

"I am playing Nosferatu (Spectrum 48K), and I can't get past the bus — could you help me get on, and also find that parachute you were talking about?" (Owen Jones, Dagenham).

an anyone help with the bus? As for the parachute, Owen, that is on the plane at the start of the adventure. I'm afraid that you will have to make the exact number of moves in order to get out of the plane before it crashes — admire the scenery for one move and you're done for! For instance, don't bother with stumbling around in the bar, it's a red herring, I'm sure. But you must examine the sleeping passenger and get what you find on him. The parachute is in the locker at the rear of the plane, and you will

get the combination to the lock by applying a bit of thought to a numerical clue that you have been given before. And, when you have landed, don't forget to drop the parachute, as the wind is blowing strongly.

Vaughan Price has managed to solve several adventures, and offers his help to others in distress: "The adventures I have completed are as follows: "Ten of the eleven Mysterious Adventures by Digital Fantasia [actually, there are now 13, so check with Vaughan] — Adventureland, Pirate, Voodoo Castle, Secret Mission and The Count by Scott Adams — Old Father Time by Bug Byte and The Incredible Hulk, the first Questprobe by Scott Adams. "If you have a problem with one of these adventures, write to Vaughan at: 30 Llantwit Road, Neath, West Clamorgan, South Wales SA11 3LB.

Vaughan gives me, as a starter, a clue for those who might be having trouble with *The Hulk*. If you are experiencing difficulty staying as *The Hulk* (look at the list of words at the end of the Corner), then 9, 17. Many people have asked how to get out of the chair at the very start — 20,5 and 22,6 Others are having trouble actually scoring any points — what you need to do in this case, is 18,8,24,10,4,21,2,15.

If you have completed, or are in the middle of *The Hulk*, write and let me know your thoughts on it — as the first Scott Adams adventure for a long while, it has been eagerly awaited, but several of your letters have said it is disappointing. To be fair, these were balanced by just as many saying how much they enjoyed it.

In the Corner of Vol 3 No. 26, Debble Dore was having trouble with getting through the crack, and Michael Latterty of Fife charged in to the rescue: "To enter the crack you must 20.25.11, but to 20.25.11, you must first perform some magic on the statue. Details on how to do this can be found 3,25,19. To get the second treasure, you must 28,7,25,14" [You'll find a way to do this if you remember your natural historyl. Michael finishes by saying, "I agree with Debbie's ratings for Voodoo and Pirate and I would like to add my vote on Secret Mission - 9/10. This adventure is the most challenging of the first four which are at present available for the BBC Micro.

1 Red; 2 Type; 3 Beyond; 4 Area; 5 Mad; 6 Tab; 7 Away; 8 Gems; 9 Remember; 10 Fuzzy; 11 Bag; 12 Some; 13 Herring; 14 Snakes; 15 Score; 16 Pain; 17 Nightmare; 18 Drop; 19 Fireplace; 20 Get; 21 Then; 22 Bite; 23 Scare; 24 In; 25 The

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13. Little Newport Street, London WC2R 3LD.

## **Adventure Helpline**

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair — help is at hand.

Fill in the coupon, explaining your problem,

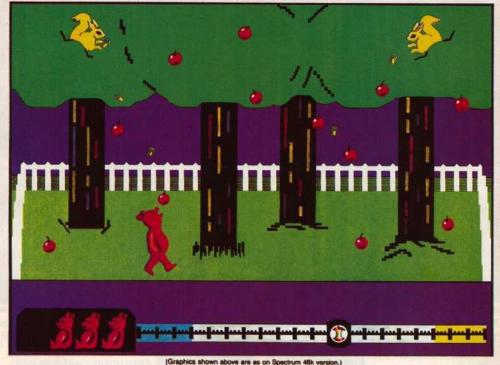

send it to us, and a fellow adventurer may be able to help.

Remember — the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

# 器 HISOFT PASCAL 器 DEVPAC

## Quality ZX SPECTRUM' Software **HISOFT PASCAL 4T**

"... I haven't seen any other compiler that could match Hisott's Pascal" ... Using the Spectrum Micro – Autumn 1983
"This is a very impressive product ... of benefit to any Spectrum programmer ..." David Bolton ZX COMPUT

Just two comments from full length reviews of our powerful and virtually full implementation of Standard Pascal. The advantages of using Pascal are well-known — tast, self-doumenting, and above all, structured programs and now, with Histoft Pascal, you can reap all these benefits on a wide range of home computers, including the 48K Sinclair Spectrum! Hisoft Pascal produces programs that run typically 40 times faster than equivalent ZX BASIC programs and, sometimes, up to 1,000 times faster!

Hisoft Pascal supports FOR DO, WHILE DO, REPEAT, UNTIL, CASE OF, INTEGERS, REALs, CHARacters, RECORDS, POINTERS, STS, ARRAYS etc. etc. — it is not at Tiny Pascal but a virtually full implementation of the language and lowing the user to develop true high-level language skills while attaining e ecution speed close to that of machine code. Complete with a 70-page manual.

### **HISOFT DEVPAC 3**

. DEVPAC is most highly recommended. The documentation is first class." Your Computer May 1983

"... If you write programs in machine code, buy DEVPAC – it is the best currently on the market." Adam Denning, ZX SOFT in Which Micro September 1983

ADEVIAC — new we have DEVPAC 3.

Two comments from reviews of earlier versions of DEVPAC — now we have DEVPAC 3 available: a powerful 280 assembler with conditional assembly, assembly from tage (to enable generation of very large code files), ORG, EQU, DEFB, DEFS, DEFW, DEFM, labels of any length — in fact all you need for fast (3,000 lines per minute) and powerful assembly programming. But it doesn't stop there: DEVPAC 3 also includes an incredible debugger/dis-assembler giving you a "tront paned" display of the 280 system and allowing extensive debugging of your machine-code program. Including single-stepping programs EVEN IN ROM!! Open up the secrets of low-level programming with DEVPAC 3.

Prices: Hisoft Pascal 4T (ZX SPECTRUM) £25 inclusive (NewBrain, SHARP MZ700 etc) £35 plus VAT Hisoft DEVPAC 3 (ZX SPECTRUM) £14 inclusive

(NewBrain £25 inclusive

\*\*\*STOP PRESS\*\*\* Hisoft Pascal for the SPECTRUM now comes complete with a Turtle Graphics package allowing fast and easy production of comples graphic displays

# Peek & Poke

# Oric questions

Philip Rumsey of Erskine writes:

Please can you tell me the answers to the following quesitons: 1. Can you buy any other language (apart from Forth) for the Oric-1 computer? 2. Can you tell me a suitable modem to buy for my computer? 3. How do you get the ~ character on the Oric?

1. Not that I am aware of. 2. In order to use a modem on the Oric you will need an RS232 interface. The only one I know of is produced by MCP (of 13 High Street, Clydach, Swansea AS6 51F), which costs nearly £40. This would then enable you to connect a modem to your machine. MCP themselves recommend the TELEMOD 2 modem, but a variety of others can be used, 3. This character is called a 'tildi'. As the Oric uses the ASCII character set, and the tildi is not part of this set, the only way you can use this character would be by creating a user-defined graphic.

# Hardware extension

Bryan Lewis of London writes:

I have a 48K Spectrum with microdrives and interface I attached. I would like to build a piece of hardware on to my computer so that when I push one key, the computer will automatically load or save a program onto cassette or cartridge. Please could you advise me on how I would go about making one, or if there is any such

item on the market.

A The hardware extension you mention is not one I have heard of as being available.

Examples of this sort of project are usually found in publications like Sinclair Projects and Micro Electronics. The Sinclair Spectrum Hardware manual, published by Melbourne House, will be invaluable to you if you do carry on with this, as will a copy of Spectrum Service Manual. The latter publication is obtainable from PV Tubes, of 104 Abbey Street, Accrington, Lancs. Although it costs £20. I think that you will find it extremely useful, and it could well stop you from making any really damaging (and expensive) mistakes.

# **Coloured** graphics

Jeremy Rompold of Swansea writes:

Please could you tell me how to get multicoloured graphic characters on the BBC micro?

In MODE 7 it is possible to print graphic characters with different background and foreground colours, simply by using the control codes. Eg. PRINT CHR\$(145); CHR\$(157); CHR\$(148); "graphics" would have the effect of printing the graphics character(s) in blue on a red background.

If you wish to print characters with each pixel in a different colour, then you will need to use machine code. You can either write to the screen directly, or via OSWORD calls; eg, assuming that we are in MODE 1.

Each byte in screen memory corresponds to 4 pixels (2 bits per pixel). Each pixel can be one of four colours, and these combinations are identified by the binary values 00, 01, 10 and 11.

Therefore, if you wanted the first pixel in the row to be in colour 3, the second to be in colour 1, the third in colour 0 and the fourth in colour 2, then the bit pattern you would need to place in screen memory is 11 01 00 10, or E6(hexadecimal). Exactly the same principle works in the 16 colour modes.

## **Genie** books

Richard Goldring of Ilfracombe, Devon writes:

I own a colour Genie computer, which I have been programming in Basic for some time. Now I feel I would like to learn machine code in order to speed up my programs. Could you supply me with titles of any books on the subject?

A There are a number of books on Z80 machine code programming. One of the best, because it is the most comprehensive, is Z80 Assembly Language Programming by L Leventhal. This book is rather expensive (£16), and so I sugest you ask your local public library to obtain it for you to have a look at before you buy it. (That applies to any book I recommend).

Unfortunately, I have not come across any books which specifically cover machine code for the Genie. However, a source of information for you on that and other topics (adventure writing) is National Colour Genie Users Group, 64 Silver Arcade, Leicester.

## Intense lines

D C Mellalieu of Southport Merseyside writes:

I have a Series 3 Spectrum, which I use with a 12" Sony black and white television. Regrettably, there is a great deal of interference on the screen which takes the form of many lines of varying intensity. Nothing I do seems to rectify this problem. Can you help?

A Sinclair machines and Sony televisions seem to have something against each other. I have received a number of letters from readers suffering this and similar pro-

blems. The TV picture on all models of the Spectrum can be adjusted internally (models 1 and 2 differ from model 3 in the way the adjustment is made).

My advice to you, and anyone else suffering this type of problem, is to either take the Spectrum back to the shop where you bought it (if your guarantee has not expired) and explain that it produces a distorted TV picture. They should then replace it for you. If you can't do that, then you should get your Spectrum adjusted.

# Prone to noise

Andrew Habstead of Halifax writes:

I have a Commodore 64 and am considering buying a modem. What is the difference between an acoustic modem and a direct coupled modem?

Also, is it true that the acoustic type can pick up noise from the room and cause errors in the program? Which type do you recommend as being able to receive as well as transmit data?

An acoustic modem passes information from one computer to another through the equivalent of a telephone handset. They require the use of a regular telephone handset (ie, a connected telephone). They do suffer from the serious flaw you mention in that they are prone to pick up noise from the room they are in.

The direct coupled (or hardwired) modem is plugged straight in to the telephone network via a British Telecom jack socket. These modems do not suffer from the room noise problem as they do not depend on the use of microphones to pick up and transmit signals. Both types of modem are capable of sending and receiving data. However, I would go for the hardwired variety.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem Peek it to Phil Rogers and every week he will Poke back as many answers as he can. The address is Peek & Poke, PCW, 12-13 Little Newport Street, London WC2R

## **ADVENTURE**

## HELPLINE

Quest on Spectrum. How do you enter the castle after opening the gate with the long key? Neil Downing, I Herald Way, Woodley, Reading, Berkshire.

Hobbit on Spectrum. How do you get past the eyes? Find the boat? Get into a barrel? Get through the magic door? Nickey Write, 4 Ashley Grove, Hucknall, Notts.

Velnor's Laix on Spectrum. How do you get across the river and the crevasse? Justin Temple, 381 Chickerell Road, Weymouth, Dorset.

Castle of Riddles on BBC. How can I get past the bear? how do I open the safe? Stephen Chapman, 62 Brocklehurst Avenue, Sheffield

Colossal Adventure on Commodore 64. I can't get past the snake in the Hall of Kings. P R Moore, Meadowview, Church Lane, Thormton Dale, Pickering, Yorks.

Bobbit on Commodore 64. How do

you send the bard to kill the dragon? Robert Daw and Kevin Scott, 31 Leda Avenue, Hengrove, Bristol BS14.

Hobbit on Spectrum. I cannot get to the lake town. How do you find the ring? Simon Illman, 2 Westerdale, Highfield, Hemel Hempstead, Herts.

Mountains of Ket on Spectrum. I cannot go through the skull in the passage? I have the cloak and most of the objects (ring, necklace etc). Andrew Morris, 86 Park Road, Silverdale. Newcastle. Staffs.

Eye of Zoltan on Electron. How do you get past the giant doors in the canyon wall? How do you solve the problem on the island next to the "plant here" sign? David Barraclough, 7 King Street, Stonehouse, Strathclyde, Scotland.

Espionage Island on Spectrum. What do the clues Try Drawing a Map and Keep on Trucking mean? What do the graffiti on the table in the guard's hut mean? Help. Michael O'Neill, 184 Lynmouth Avenue, Morden, Surrey.

Hobbit on Spectrum. How do you get into the Lonely Mountain when a hole appears? Gary Beeny, 23

Crescent Road, Marland, Rochdale, Lancs.

Hobbit on Spectrum. I have escaped the goblin's dungeon and got to the edge of the lake. Answering Gollum's riddles correctly seems to have no advantage. I either get strangled or dragged back into the goblin's dungeon. Can you help? Tony Harvey, Lynton, Chorleywood Bottom, Chorleywood, Herts. Quest on Spectrum. I have collected the key and unlocked the door to Castle Oops but I still cannot enter. Paul Lucas, 7 The Lock Cott's, Riverside, Dartford, Kent. Voodoo Castle on Vic20. I have found both the book and the missing page but when I follow the instructions to lift the curse nothing happens. What should I do? A Morris, 176 New Street, Horsham, Sussex.

Hobbit on Spectrum. How do I get out of the Elven Kings' Hall through the trap door without being killed by the portcullis? Nicholas Hill, 56 Hales Gardens, Erdington, W Midlands

Valhalla on Spectrum. I cannot find Ofnir. T J Arnold, 118 School Road, West Walton, Wisbech, Cambs.

## STORMY

More games from Atlantis who have joined Mastertronic in the giddy world of £1.99 games and whose games, so far, have proved excellent value for

Master Mariner is a trading game in which you play the owner of a ship who trades in various goods, trying to buy and sell and make a profit.

Aside from the sheer mechanics of the market place which will affect how much, if any, profit you make, factors like storms, finance companies and getting caught for dealing in arms, will also affect you.

I've seen more complex simulations, but it's still good fun to play with intermittent animated sequences to liven it up. At £1.99 it's got to be a winner, hasn't it, John?

Price Micro Supplier

Program Master Mariner £1.99 Spectrum Atlantis 19 Prebend Street London N1 8PF

## **WONKY ECG**

Software that manages to educate at a sophisticated level, ie, not five and six year olds, is a rare and splendid thing. So, even though it is hardly likely to be of use to the average software punter, Medidata is to be congratulated for its Diseases of the Heart program.

This is a serious package indeed, dealing as it does with the Endocardium, Valves, Myocardium, Pericardium and all the diseases they may have. The computer is used to display dubious pulses, wonky ECG's and even a variety of heart sounds, all of which are quaranteed to give you a pain in the chest and make you decide to take it easy for a bit.

The program is very intelligently designed and adopts a kind of mini teletext design to present the information - for example, having the first part of the text on cardiac arrest you might be told to go to 103 for more information.

The system works well and does seem to be a good way of presenting a database of information, there is even a microdrive option. The program is also one of those classic examples of being in Basic not mattering. Certainly of interest to Spectrum owning Doctors, O and A level Biology students, and hypochondriacs everywhere.

Program Diseases of the Heart

## FILL ROUTINE

Artist is a computer-aided design program for the BBC B. It isn't the first of its type and certainly won't be the last, but it's neatly designed and inexpensive.

Aside from the basic drawing and filling routines complete with four sizes of cursor - there are menu options for the simple creation of Circles, Elipses and Triangles, Fill routines, Background colour change, reference grid, etc. In short, more or less everything you could want including a save to disc if you have it.

There is a menu, which is continuously displayed to remind you of what key does what and does away with the need for any separate manual.

## STATE OF THE CASE

Hobbit fans will have been expect the journey to be over. waiting with bated breath and lung collapse.

pointment may set in.

ted text adventure home micro be lying, of course. yet seen.

The plot, obviously, involves Sherlock Holmes, Watson, several dastardly murders and much travelling by hansom cab. The English analysis system is almost exactly the same as used on The Hobbit, although the vocabulary is larger (800 words understood and 53 different actions possible) including adverbs like fairly, furiously, steadily and madly although where you might use this last one I can't quess.

Apart from the occasional graphics which take up about a third of the screen, the display is in two sections: the top two thirds for the vast amount of text displayed and the bottom third for your commands. From the moment you make your first keypress when the game is loaded a clock starts and you are in 'real time'.

The concept of real time is not new to adventures, but I've never seen it used in quite the same way as it is in Sherlock. For example, suppose you get a cab to a station the journey might take ten minutes or more and in the game it would literally take ten minutes before you Micro arrived. During this time you Supplier Melbourne House might want to converse with Watson about the state of the

Sherlock Holmes, possibly the case or, thankfully, you can longest delayed program ever, artificially speed up the clock has now been released. Quite by typing Wait Until ... and folloobviously the milling hoards of wing it with what ever time you

Like Hobbit, there are a must have been on the point of number of separate characters who lead an independent life The problem for some of and to whom you can speak. those people, though, is, that You can 'Say to Watson "Read Sherlock is very likely not to be the Daily Chronicle" and the what they expected at all. like, but there is also a signifi-Judge it too quickly and disap- cant additional element to conversation. At various points The biggest shock with you will have to talk to and Sherlock is that it has very few argue with a variety of susgraphics indeed and the few it pects, using the phrase 'tell me has are not very impressive, about as in: 'Say to Major Knight's Quest quality at best. Foulkes tell me about the pistol' The best policy is to regard the which will elicit a mixed bag of graphics as a mere extra bonus information about himself, and regard Sherlock instead as other characters (perhaps), alipossibly the most sophistica- bies and so on. He might also

Sherlock Holmes the adventure is about as devious as Sherlock Holmes the master sleuth. After several hours I still hadn't even found the right train for Leatherhead and the program told me to give up. I think it's probably too early to commit oneself yet to Sherlock it's going to need a lot of time, but my hopes are high.

## **UP-TEMPO**

The Spectrum is not short of music programs, Surprising really when you consider how hopeless the sound is, and they all do pretty much the same things. Specture is no exception but it's better than most. It's successful because it concerns itself with teaching matters.

It has the usual options to choose Key signature, tempo, beats per bar, etc, and you can compose using the cursors and screen. The program will ask you questions, play tunes and generally let you play about with your masterpieces.

Program Price Micro Supplier

Spectune £5.95 Spectrum XORSoft Unit 7 Newington St Hawthorne Ave Eall HU3 SND

## FLOATING DEBRIS

Strange Loop is the title of yet another release from Virgin part of a small number of titles intended for the autumn/winter season. But Strange Loop is quite different from the usual standard of Virgin games (almost without exception between bad to run of the mill). Strange Loop is unique, graphically impressive, vast, and devious; in short, brill.

In the game you guide a vacuely letpac-like spaceman through a vast mechanical factory patrolled by robots and full of various bits of floating debris - indirectly harmful since as they bash into you, they gradually puncture your space suit and your life supporting oxygen escapes.

Your task is to find your way to the factory control room which lies somewhere within a matrix of 256 rooms, many of them exceedingly dangerous. The screen displays a large view of the room you are in, with control panels at the bottom of the screen and a smaller map display showing you what lies in the adjacent rooms.

Blasting, as such, is a relatively unimportant aspect of play. In fact, this is an arcade adventure in which you really do have to use adventure thinking to stumble your way from death dealing room to death dealing room. There is a jetcycle that is useful for some parts of the maze (but can you figure out how to get it?) Not only all this, but it's cheap too.

Program Strange Loop Price £5.95 Micro

Spectrum Supplier Virgin Games 24 Vernon Yard Portebello Road London W112DX

## GLOOM

Zorakk the Conqueror is a graphic adventure in the strategy mould rather than the animated figures of Valhalla, etc. The main graphic is a map that tells you where you are and what can be found in the immediate vicinity.

Your quest is to obtain the three parts to the crown of Ultimate Darkness (not to be confused with the three parts of the crown of pretty severe gloom), each of the parts being located in different areas Lannia, Durain and Zarthynia,

To complete the quest will involve bargaining in the Bazaar for warriors and food, doing battle and exploring tombs and ruins. You move on the screen from square to square with a text area telling you what's going on. Graphics are large and colourful and strategy buffs should find nothing to complain about.

Price Micro Supplier Icon

Program Zorakk the Conqueror BBCB the Conqueror 65 High Street Gosforth Tyne & Wear NE34AA

## LIGHTNESS

Forest at World's End is one of the best graphic adventures of the old school; ie, an adventure with some graphic illustrations, I've seen in quite a while. Plot wise...well, it concerns the continuous battle between the forces of light and darkness in which princess Mara has been captured by the evil wizard Zarn, etc, etc.

The graphics, though, are really quite impressive, apparently drawn by somebody who actually knows how to draw. Basically, it only understands the usual syntax of verb noun, but there are enough evocative touches in the place descriptions for that not to notice too much.

If the plot doesn't bother you in its look of originality and you simply want a good graphic adventure to add to the collection, this one looks well worth having.

## **OLD HANDS**

ZX81 owners, and I believe there are still one or two left. might like to know of Spectrumiser by James Paton. This is a machine code utility program that lets you use hi-res on your games; a similar technique to that used by Software Farm on is well-received games.

It couldn't in all honesty be

said to be an easy program to use - you will certainly need to be familiar with much of Basic to get the most from it but then probably most ZX81 owners are old hands at the programming game anyway.

Program Spectrumiser £6.50 Price Micro 7X81 Supplier James Paton

2 The Avenue Fallings Park Wolverhampton

## **DECISIONS**

Puffin is soon to release two more packages in its combined software/book packages The Forest of Doom and Citadel of Chaos. Both are for the Commodore 64 although a Spectrum version of the former is expected.

The games are firmly based on the Fighting Fantasy books and thus as a computer game they are somewhat different from the norm,

For those not familiar with the books, they are unlike conventional narrative tales and instead consist of a large number of numbered paragraphs - which form the fragments of several complete stories with similar themes. In some you are triumphant, in others you fail miserably. What decides this are the decisions you take, and the throw of dice which will give you amounts for stamina and bravery.

Although it sounds cumbersome, it works well, although it's easy to cheat - but obviously it's ideally suited to a computer. The Forest of Doom has everything the book has with the addition of sound. graphics, automatic dice throwing, instantaneous display of character sheet, text sheet, notebook and so on.

If you like the books you'll certainly like the program. If you're used to more conventional adventures, it's uncertain whether you'll find this to your

## INTELLIGENT

Good God, look at this! A computer listings book that isn't completely useless and

It's called Fifty Subroutines for the Sinclair Spectrum and whilst what it offers seems to me to be suitable only for a specialised audience, that audience should find it very useful indeed.

Basically the book contains all those mathematical routines that professionals find useful in business programs and the more serious games - the kind of thing you might otherwise spend days trying to work out. These include the Evaluation of Determinant, various sorts of series, parallel projection, etc.

These include the Elvaluation of Determinant, various sorts of series, parallel projection etc.

Of course, it's not all maths; you get double height characters, inputting data, underlining and wordsorting, for example -57 routines in all. Useful and intelligently written too.

## TRICKY

One of the things it is almost impossible to avoid when reviewing books is machine code. In particular, machine code on the Spectrum. There are so many books on the subject it is sometimes difficult to believe that there is anybody who has not yet mastered this tricky subject (except oneself, of course)

Practical Spectrum Machine Code is one of the relatively few number of books from Virgin better known (in computer circles) for its games.

To its credit, this is the first book on machine code that has begun to explain to me not so much how to load the A register with the value from the B rgister and put the lot in the C register, but why this should make your laser cannon fire.

A good deal of the book is taken with the development of a machine-code Space Invader program which you develop section by section. Not only good but cheap(ish) too.

This Week is a new section that covers all the new software coming on to the home micro market each week. All suppliers should send details of their new programs to: This Week, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

## Puzzle

# Data protection

ry imagining how society would work without the written word. It's almost impossible, isn't it? Recorded information is the basis of modern life and much of that information consists of facts about people.

Such personal information is both valuable and sensitive, and all sorts of organisations keep it — the DHSS, doctors, dentists, schools, employers, manufacturers (often via those innocuous guarantee cards), banks, the police. Information can range from a skeletal name and address, to a detailed wedge of highly pesonal data.

Yet until recently no one had any right whatsoever to know about what sort of information was being kept about them, or to have any control over it.

Now the government — under pressure from more liberal countries which already have such legislation — has introduced the Data Protection Act which will give people certain rights in relation to all such 'personal data' kept on them by other people.

The snag is that those rights will only apply to information held on computers — this despite the fact that 90 per cent of all files are still kept on paper.

The justification for this is that information stored on computer can be far more easily (and surreptitiously) recorded, expanded, tampered with or transferred.

Inevitably, though, this will leave a loophole. To get round the act 'data users', as the

act calls those people who store such data, simply have to avoid computerising information (surely a backward step to encourace!).

What the act does is to create someone called the Data Protection Registrar — in this case Eric Howe, former deputy director of the National Computing Centre. Once the act is fully in force which will take up to two years — anyone who wants to keep computerised personal data will have to register first and give lots of details about the kind of information they want to keep, where they will get it, and who they will allow to see it.

They will also have to comply with a number of 'principles' set out in the act, on such things as the way the information is collected ('fairly and lawfully'), the need for it to be accurate and the obligation to keep it up to date.

If requested they will have to tell an individual whether a file is being kept on him or her, and allow the person to see what information it contains. Inaccurate facts will have to be corrected and anyone who loses out either because of such inaccuracies or because information was disclosed to the wrong person, will be able to go to court and get damages.

There are exceptions. Government departments such as the Inland Revenue and the police, for example, will not necessarily have to show you the information which they have on file. Home computers used for 'domestic' reasons (ie, to do with personal, family or household affairs) are excluded, as are mailing lists provided they only contain names and addresses — and that the individuals concerned are asked first.

Whether the act works or not will depend on the resources given to the Registrar, and on the tenacity with which he polices the system and investigates complaints.

Although the restriction to computerised files is a big loophole, at least the Act is a step towards a more open society.

## **Hotcakes**

#### Puzzle No 123

I popped into my local booksellers for a copy of the latest best-selling novel *The Xanadu Conun*drum It was quite reasonably priced as far as these things go — the paperback version was £1.07 pence.

"We have it in hardback, also," said the assistant, and as it was intended as a present, I changed my mind and opted for the more expensive edition.

"That title has been selling like hot cakes since the film version was shown on television over the weekend," remarked the shop assistant as my purchase was wrapped up. "Tve sold twenty copies of the hardback alone since we opened this morning, and our total takings so far for both editions is now exactly one thousand pounds.

I took my package, and my penny change from the six pounds that I had tendered, but as I left the shop and started wondering how many copies of the book in total they must have sold.

Can you say how many?

#### Solution to Puzzle No 118

In the program a value, X, is cubed, two million is subtracted from this, and the result is tested to determine if its square root is a whole number, Y.

Note Line 50 which limits the accuracy of the square root value to avoid problems with small inaccuracies in this evaluation. The value of X must be 127 or greater as its cube must exceed two million.

10 X = 127 20 CUBE = X \* X \* X 30 SQUARE = CUBE — 2000000 40 ROOT = SQR (SQUARE) 50 ROOT = VAL(STRS(ROOT)) 60 IF ROOT = INT(ROOT) THEN PRINT X, ROOT 70 X = X + 1 80 GOTO 20

This reveals the alternative values of: X = 129 and Y = 383.  $129^3 = 2,146,689$  and  $383^2 = 146,689$ .

#### Winner of Puzzle No 118

The winner is Robert Daw, Leda Avenue, Hengrove, Bristol, who receives £10.

#### Rules

The closing date for entries to Puzzle No 123 is September 22.
